

# Data: HIV care and treatment program

## SEEK-TEST-TREAT-RETAIN CASCADE

\*no ART retention data on PWID

PWID have disproportionately low access to treatment and care

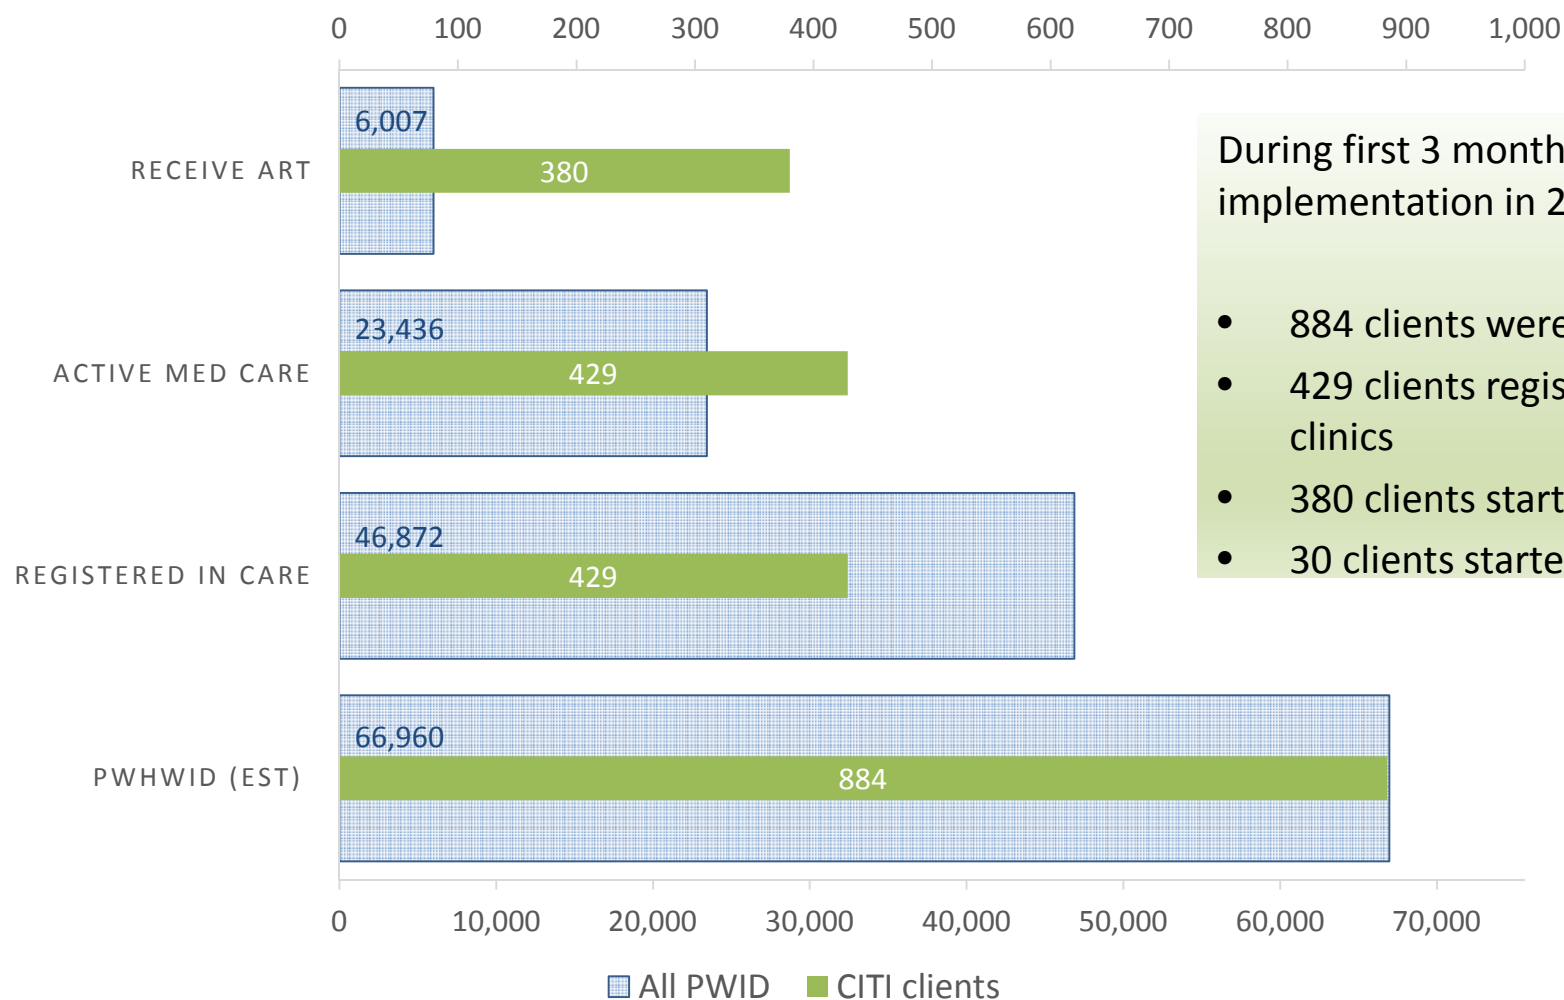

## Alliance's developed actions in response: Community initiated treatment intervention (CITI)

- Short term rapid linkage to treatment intervention which facilitates early treatment access for active drug users.
  - locate HIV positive clients in harm reduction and link them to HIV treatment using a case management approach.
  - support HIV positive clients up to 6 months into ART (if no support provided through other projects - care and support, MAT, integrated services)
  - refer to care and support projects or other available resources for long term treatment support.

CITI is mostly focused on linkage to ART with build-in short term adherence support.

# CITI preliminary data

During first 3 months of CITI implementation in 2014:

- 884 clients were involved
- 429 clients registered in AIDS clinics
- 380 clients started ART
- 30 clients started MAT
